

Kai Chan

Senior Application Support Engineer | SQL & Data | Business Systems

Tampere, Finland | +358 45 351 9059 | Kai@Chan.fi | [linkedin.com/in/KaiJChan](https://www.linkedin.com/in/KaiJChan) | github.com/Kai-JC

SUMMARY

Senior Application Support Engineer with 10+ years supporting enterprise e-commerce and retail systems. Owns SQL reporting and data warehouse development across Oracle and SQL Server, and acts as the final escalation point for 200+ users before developer involvement. Reduced critical incident resolution time by around 30% and continues to improve overnight data import logic and automate routine operational work through PowerShell, SSRS and Power BI.

TECHNICAL SKILLS

Databases & Data: SQL Server, Oracle, PostgreSQL, MongoDB, SSRS, Power BI, ETL, Data Warehousing

Cloud & Infrastructure: Azure, Active Directory, VMware (vCenter), Microsoft Exchange, Mimecast, Mitel VoIP

Scripting & Automation: PowerShell, JSON, HTML/CSS, Batch

Tools: Jira, Confluence, GitHub, Postman, Geckoboard, Meraki Dashboard

PROFESSIONAL EXPERIENCE

Poole Bay Holdings Management Ltd

Senior Application Support Engineer 2026 – Present

ITSD Technician → Senior ITSD Technician 2016 – 2026

E-commerce and retail systems environment supporting 200+ users across operational and warehouse platforms.

- Cut critical application incident resolution time by ~30% by acting as final escalation point and building a documented troubleshooting runbook in Confluence now relied on by first-line technicians, fellow senior engineers and managers.
- Eliminated recurring data discrepancies across multiple core e-commerce platforms by diagnosing root causes with development teams, correcting the underlying logic and repairing affected data so issues did not reoccur.
- Delivered 25+ automated SQL reports serving 200+ business users by designing and maintaining SSRS and Power BI reporting across Oracle and SQL Server databases.
- Improved data warehouse reliability by re-engineering overnight ETL import logic, contributing to ongoing ownership of the company data warehouse environment.
- Reduced manual operational workload by automating routine reporting and administration tasks in PowerShell.
- Sustained dependable supporting infrastructure by managing telephony (Mitel VoIP), Kofax printing, Azure, Active Directory and VMware vCenter environments.
- Mentored first-line technicians and maintained internal technical documentation as the team's reference standard in Confluence.

JP Morgan — Hardware Engineer 2014 – 2016

- Secured enterprise desktop environments for 4,000+ users by configuring encrypted, compliance-ready workstations within a regulated financial services infrastructure.
- Standardised configuration and imaging processes to speed up device deployment and reduce setup inconsistencies across corporate systems.

Chillblast — Technical Engineer 2012 – 2014

- Built and tested 1,000+ custom PC systems with a sub-1% return rate, averaging ~15 units per day while validating hardware compatibility and performance.
- Trained apprentices in system assembly, diagnostics and troubleshooting, raising team build quality and consistency.
